

A playable library, with the skills to reuse it.

UI mockups for a discovery marketplace of open-source games and reusable capabilities. The agent plugin is a core part of the MVP.

The experience

1. Discover
2. Search by intent
3. Play a project
4. Inspect a capability
5. Use with the plugin
6. Review changes
7. Contribute a project
8. Preserve provenance
9. Set up preloaded skills

9 desktop screens and 1 mobile screen. Every image is also supplied as a high-resolution PNG.

Concept artwork is illustrative. Real demo and source links are included in the HTML prototype.

Screens show proposed behavior. Sample status labels are not verification results. The plugin starter includes skills and references; its live catalog connection is still implementation work.

01 / Discover playable building blocks

The catalog starts with capabilities and curated demos. No sign-in is needed to explore.

Not connected

Target workspace

Choose in agent

The starter includes skills and reference material. It does not install itself or change your game.

Check setup requirements

Preloaded game knowledge

Search taxonomy
Three.js / R3F integration guidance
Source and license evidence rules
Validation and credit templates

Catalog search reads public metadata. Your existing agent controls local file access and authorized edits.

Return to my integration

Concept UI • illustrative artwork and sample verification states • external demo and source links open real projects

Design concept | Working name | 10 September 2026

10

Start with intent

The search prompt invites a description of the desired game or mechanic.

Preview before committing

The discovery surface stays useful on a phone. A desktop-only game should explain its input needs before launch.

Return to the workspace

Save a building block or send it to the agent plugin when a compatible workspace is available.

Implementation boundary

This prototype demonstrates responsive layout. Production must test touch controls, keyboard navigation, accessible labels and each demo’s actual mobile support.
